The listing of claims will replace all prior versions, and listings of claims in the application.

1-12 (Cancelled)

13. (Previously presented) A system, comprising:
  - an illumination system that supplies a beam of radiation;
  - a spatial light modulator that patterns the beam, the spatial light modulator including,
    - a non-linear substrate, and
    - an array of individually controllable elements coupled to the non-linear substrate;
    - a projection system that projects the patterned beam onto a substrate;
    - a directing device that directs the beam onto the spatial light modulator and the patterned beam onto the projection system; and
    - a focusing optical element that focuses the beam from the directing device onto the spatial light modulator, wherein a radius of the focusing element is substantially smaller than a radius of the spatial light modulator.
14. (previously presented) The system of claim 13, wherein a chief ray of the beam impinges each element in the array of individually controllable elements normal to a surface of each of the elements.
15. (previously presented) The system of claim 13, wherein the directing device comprises a means for correcting aberrations in the beam.
16. (previously presented) The system of claim 13, wherein the non-linear substrate has a curved shape.

17. (previously presented) The system of claim 13, wherein the non-linear substrate has a concave shape.

18. (previously presented) The system of claim 13, wherein the non-linear substrate has a spherical shape.
